No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The present invention relates to a polypeptide comprising a 20 amino acid sequence derived from human telomerase catalytic subunit (or human telomerase reverse transcriptase, hTRERT) amino acid residues 537-556, or fragments thereof comprising at least 10 amino acids and at least two human leukocyte antigen (HLA) class I or class II epitopes. The invention also describes a polypeptide having the above 20 amino acids peptide sequence as additional C and/or N-terminal sequences on a fragment of hTERT which is not more than 100 amino acids of hTERT. The polypeptides of the invention are useful in a pharmaceutical composition or in a vaccine for preventing or treating cancer in populations of individuals having varying HLA profiles. The polypeptides are also useful in a diagnostic kit for diagnosing cancers such as breast, pancreatic, colorectal, lung, ovarian or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; telomerase catalytic subunit; hTERT; human leukocyte antigen; human telomerase reverse transcriptase; HLA epitope; cancer; HLA profile; breast cancer; paracreatic cancer; cancer; cancer; lung cancer; novarian cancer; cervical cancer; malignant melanoma; leukaemia; lymphoma; bilary tract carcinoma; anti-cancer; mutant; cytostatic; HLA class I epitope; HLA class II epitope; mutein.
coding it - useful for diagnosis of diseases caused by the change in activity of a telomerase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             hTERT fragment with HLA containing polypeptide at its N-terminus.
                                                                                                                                                    The specification describes a human catalytic telomerase protein. The products are useful in drug compositions for the diagnosis of diseases caused by the change in activity of telomerase. The present sequence appears in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New polypeptide with an additional C-terminal and/or N-terminal sequence, useful for preparing anti-cancer vaccines

                                                                                                                                                                                                                                                                                                                                                  The present sequence represents an antigenic peptide from human telomerase reverse transcriptase (hTRT) from the present invention. The present invention also describes the following methods: (A) determining whether a test compound is a modulator of hTRT, by detecting the change in hTRT recombinant protein or polynucleotide, on administration of the compound; (B) preparation of recombinant telomerase by contacting a protein preparation of hTRT with a telomerase by contacting a protein preparation of hTRT with a telomerase by contacting a protein preparation of the hTRT with or protein in a sample by binding a relevant probe to the sample and detecting the complex formed or in the case of RNA detection, amplifying the product and correlating the presence of complex or amplification product with presence of hTRT in the sample, and (B) increasing the product with presence of hTRT in the sample, and (B) increasing the use of an agent that causes an increasing hTRT can be used in the manufacture of medicaments for inhibiting the ageing. A protein preparation of hTRT and the polynucleotide encoding hTRT can be used in the manufacture of medicaments for inhibiting the used to treat conditions that are associated with high telomerase contrainty. A protein preparation of hTRT can also be used in the new
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

sample and detecting the complex formed or in the case of RNA detection, amplifying the product and correlating the presence of complex or amplification product with presence of HTRT in the sample; and (D) increasing the product with presence of HTRT in the sample; and (D) increasing the proliferation of a vertebrate cell by increasing HTRT expersion; and (E) the use of an agent that causes an increase in cell vertebrate cell proliferation to create a medicament that inhibits ageing. A protein preparation of hTRT and the polynucleotide encoding HTRT can be used in the manufacture of medicaments for inhibiting the effect of ageing or cancer. Inhibitors of telomerase activity can be used to treat conditions that are associated with high telomerase activity. A protein preparation of HTRT can also be used in the new
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (HTERT). The invention relates to a monoclonal antibody recognising the hTERT. The antibody can be used for the investigation, diagnosis and treatment of telomerase-related diseases, especially diseases in which telomerase expression is up-regulated e.g. cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New monoclonal antibody recognizing human telomerase catalytic subunit (hTERT) useful for treating and diagnosing cancer -
                                                                                                                                                                                                                                                                          Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  셤
                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents a human telomerase reverse transcriptase (HTRT) procein from a cDNA clone from the present invention. The present invention also describes the following methods: (A) determining whether a test compound is a modulator of hTRT, by detecting the change in hTRT recombinant protein or polynucleotide, on administration of the compound; (B) preparation of recombinant telomerase by contracting a protein preparation of hTRT with a telomerase RNA component; (C) detection of the hTRT RNA or protein in a sample by binding a relevant probe to the
                                                                                                                                                                                                                                                                                                                                                                                                                                    Human telomerase reverse transcriptase protein from cDNA clone 712562.
tract carcinoma. The polypeptides or encoding polynucleotide sequences are useful for performing identity, sequence homology and/or hybridisation studies, for predicting structure and/or function (e.g. anti-cancer activity), or for screening methods in drug development or drug screening procedures. The present sequence represents a hTERT fragment with the 20 amino acid HIA epitope

```
proteins containing a reverse transcriptase motif, which act as telomerase inhibitors. The gene, its encoded protein and derived antibodies can be used to provide base sequence information, detect telomerase activity and cancer cells, and to screen telomerase inhibitors. The detection method is simple and effective.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human telomerase reverse transcriptase 63 kDa clone 712562 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention describes novel human CRT-1 genes and their encoded
                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel gene, useful in detection of telomerase activity and cancer cells as well as screening telomerase inhibitors for treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human, telomerase reverse transcriptase, hTRT, TRT, diagnosis, prognosis, cell proliferation, cancer, ageing, ribonucleoprotein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes novel human CRT-1 genes and their encoded proteins containing a reverse transcriptase motif, which act as telomerase inhibitors. The gene, its encoded protein and derived antibodies can be used to provide base sequence information, detect telomerase activity and cancer cells, and to screen telomerase inhibitors. The detection method is simple and effective.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel gene, useful in detection of telomerase activity and cancer cells as well as screening telomerase inhibitors for treatment of

New catalytic protein of telomerase of a higher animal and a gene coding it - useful for diagnosis of diseases caused by the change in activity of a telomerase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel gene, useful in detection of telomerase activity and cancer
                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents a catalytic telomerase protein. The products are useful in drug compositions for the diagnosis of diseases caused by the change in activity of telomerase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ..

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       유
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is a human telomerase reverse transcriptase (hTRT) clone protein from the present invention. The present invention also describes the following methods: (A) determining whether a test compound is a modulator of hTRT, by detecting the change in hTRT recombinant protein or polynucleotide, on administration of the compound, (B) preparation of Frecombinant telomerase by contacting a protein preparation of recombinant telomerase BNA component; (C) detection of the hTRT RNA or protein in sample by binding a relevant probe to the sample and detecting the complex formed or in the case of RNA detection, amplifying the product and correlating the presence of complex or amplification product with presence of hTRT in the sample; and (D) increasing the proliferation of a vertebrate cell by increasing hTRT expression; and (E) the use of an agent that causes an increase in cell vertebrate cell proliferation to create a medicament that inhibits ageing. A protein preparation of hTRT and the polynucleotide encoding hTRT can be used in the manufacture of medicaments for inhibiting the teffect of ageing or cancer. Inhibitors of telomerase activity can be used to treat conditions that are associated with high telomerase conditions that are associated with high telomerase are not an expression of hTRT can also be used in the mean associated with high telomerase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ;

preparation of recombinant telomerase by contacting a protein preparation of hTRT with a telomerase RNA component; (C) detection of preparation of hTRT with a telomerase RNA component; (C) detection of the hTRT RNA or protein in a sample by binding a relevant probe to the sample and detecting the complex formed or in the case of RNA detection, amplification product with presence of hTRT in the sample; and (D) increasing the prodiferation of a vertebrate cell by increasing hTRT or presence of the use of an agent that causes an increase in cell vertebrate cell proliferation to create a medicament that inhibits ageing. A protein preparation of hTRT and the polymucleotide encoding hTRT and be used in the manufacture of medicaments for inhibiting the effect of ageing or cancer. Inhibitors of telomerase activity can be used to treat conditions that are associated with high telomerase controls.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Telomerase; human; cancer; diagnosis; melanoma; skin cancer; leukaemia; neuroblastoma; breast carcinoma; colon carcinoma; lymphoma; osteosarcoma; smooth muscle cell hyperplasia; stem cell proliferation; Wilm's tumour; stem cell differentiation; organ regeneration; organ differentiation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence is a truncated human telomerase of the invention. Primers that amplify the telomerase coding sequence can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated vertebrate telomerase genes - used to develop products for treating cancers or for organ regeneration, nerve cell or brain cell growth following injury or bone marrow transplantation
protein or polynucleotide, on administration of the compound; (B)
